2013 **Jetta Quick-Start Guide**

Das Auto.

The information within this guide must be used in conjunction with the information in the Volkswagen Owner's Manuals. Refer to your vehicle's Owner's Manual for all information and warnings. By using this guide, you acknowledge that you are aware of and have read the warnings and information provided in the Owner's Manual on the topics in this guide and will use this information to augment that material.

Your Jetta comes standard with anything-but-standard style and convenience. And that's just the beginning. You'll also discover dozens of great features that make long drives a little easier, and a lot more fun. Because at Volkswagen, we want to be sure that you're getting the most out of your time behind the wheel. So we've created this guide to take you through it all, and show you how quickly you'll be speaking fluent Volkswagen.

Bluetooth® Technology

Pairing your phone

First, check your phone's compatibility at www.vw.com/bluetooth.

Start the ignition. Your car's Bluetooth system will be in "discovery" mode for the next three minutes.

From the Bluetooth menu on your phone, search for new devices and select VW PHONE.

Phone connection will be established automatically, and connection indicator will appear on the phone.

Reconnect Automatically

If your phone displays a prompt asking to connect to VW PHONE, make sure to enable future automatic connections.

Pairing your phone with an RNS 315-equipped car

First, check your phone's compatibility at www.vw.com/bluetooth.

Start the ignition. Your car's Bluetooth system will be in "discovery" mode for the next three minutes.

From the Bluetooth menu on your phone, search for new devices and select VW PHONE.

A connection request will appear on the RNS 315 touchscreen display. Press PAIR on the display.

When you see a six-digit PIN* appear on your phone, press YES on the display. Then press PAIR on your phone.**

*Some phones may require entering a four-digit PIN (0000) to complete the pairing process. **Once the PIN is shown, pairing must be completed within 30 seconds. Otherwise the process will need to be repeated.

Bluetooth Voice Recognition

Press the microphone button until you hear a chime. Your VW will say, "Main menu." Then take the following steps.

Text* **SPEAK** to **50467** to watch the Voice Recognition video.
Message and data rates may apply.

Call by name

After you hear a beep, say, "Call" followed by the name of the person you want to call. For example, "Call Mike Brown." The system will repeat your request. Say, "Yes" if correct. The system will answer, "Calling Mike Brown."

Redial

After the beep, say, "Redial."

Help

After the beep, say, "Help." Then follow the prompts.

*Do not text while driving.

Answer an incoming call

The Bluetooth system will interrupt your car stereo with a ringtone. Press the phone button on the multi-function steering wheel.

LEARN MORE AT
vw.com/jetta2013

Important Warnings and Safety Information, which you must read, are listed on the last panel, under BLUETOOTH TECHNOLOGY WARNINGS.

Optional Premium VIII Audio

Text* **PREMIUM** to **50467** to watch the Premium VIII video.
Message and data rates may apply.

Select and save a preset radio station

Press AM, FM or SAT to select a band.

Use the tuning knob at the lower right to select a station, then press and hold any preset station soft key until you hear a confirmation beep.

The new station will appear in the display.

By pressing the Presets soft key, you can change through additional presets.

*Do not text while driving.

Streaming audio with Bluetooth® technology

First, pair your compatible Bluetooth equipped phone or audio player. (Refer to the pairing instructions in this booklet.)

Press the MEDIA hard key.

Press the BT-Audio soft key.

To navigate through your music, press the PLAY/PAUSE, PREVIOUS, and NEXT TRACK soft keys.

HD Radio® Programming. HD Radio is totally free programming, offering crystal clear sound—FM stations have CD-quality sound, while AM stations sound like FM stereo. HD Radio also offers more variety, as many FM stations broadcast extra HD multicast channels.

HD Radio Signal Interruption. When leaving the HD coverage area, HD1 channels will switch to the analog signal, while HD2/HD3 channels will cut off completely, without gradual fading. This is normal. The signal will refresh as you drive.

SiriusXM Satellite Radio. New Volkswagen vehicles come with a three-month trial subscription to the Sirius Select package. Infrequently, tall buildings and tunnels may interrupt the satellite signal. This is normal. The signal will refresh as you drive. For more information, please refer to the SiriusXM brochure in your glove box.

LEARN MORE AT
vw.com/jetta2013

Important Warnings and Safety Information, which you must read, are listed on the last panel, under PREMIUM VIII WARNINGS.

Optional RNS 315 Audio and Navigation

Enter a destination

Press the NAV hard key.

Tap the flag icon on the touchscreen. This will allow you to enter the address.

Enter the state first, then the city, the street, and the number.

Not sure about the number of the address? You can just enter the state, the city, and the street. Then press the List soft key to display the street.

Confirm the address. If the address is incorrect, press the back button to return to the address entry screen.

Press the START soft key to begin your route.

Change the route settings

The system will automatically display the fastest route. You can also have the most economical or shortest route displayed.

Within the Navigation screen, press the SETUP hard key.

Choose ROUTE OPTIONS.

Choose ROUTE CRITERIA.

Now you can change from the Fast default to Economic or Short.

Streaming audio with Bluetooth® technology

First, pair your compatible Bluetooth equipped phone or audio player. (Refer to the pairing instructions in this booklet.)

Press the MEDIA hard key. Audio will start to play from your phone.

If other media are connected, such as an SD card, CDs or an iPod, press the soft key on the menu.

To select the next or previous track, press the arrow hard keys on the left side of the steering wheel.

To pause a song, press the radio tuning knob.

Set your presets | Press the BAND hard key repeatedly to toggle between FM, AM, or SiriusXM.

AM/FM stations

Turn the center knob to your desired station, then press and hold the knob. The preset soft keys will appear. Press and hold a preset soft key until you hear the confirmation tone. To save another preset, turn the center knob again to choose a station, and repeat the steps.

SiriusXM channels

Press the Station List soft key. Then turn the center knob to your channel and press the knob to select. Press the Save soft key; the preset soft keys will appear. Press a preset to save a channel. To save another preset, turn the center knob again to choose a channel, and repeat the steps.

SiriusXM Satellite Radio. New Volkswagen vehicles come with a three-month trial subscription to the Sirius Select package. Infrequently, tall buildings and tunnels may interrupt the satellite signal. This is normal. The signal will refresh as you drive. For more information, please refer to the SiriusXM brochure in your glove box.

Important Warnings and Safety Information, which you must read, are listed on the last panel, under NAVIGATION WARNINGS and RNS 315 WARNINGS.

iPod® Adapter

To connect your device, here's all you need to do.

RNS 315

First, note that your iPod music player must be Generation Four or newer.*

Connect it to your car's MDI cable.

Audio from your device will play through your speaker system.

To choose a song, press the LIST soft key, then the UP soft key. To display the category list, press the UP soft key again.

Premium VIII

First, note that your iPod music player must be Generation Four or newer.

Connect it to your car's MDI cable.

Press the MEDIA hard key.

Press the MEDIA-IN soft key until the external audio device is shown in the display.

To choose a song, press the Selection soft key.

To display the category, press the key with the folder icon at the upper left of the screen.

To return to the main screen, press the Back soft key on the upper right corner of the screen.

*For more information on iPhone 5, please visit vw.com/jetta2013

Playing your media device with the auxiliary jack

First, plug in your media device to the auxiliary jack. Note that an auxiliary cable does not come standard.

Premium VIII

- Press the SETUP hard key.
- Press the MEDIA soft key.
- Press the Enable AUX Input soft key.
- Press the MEDIA hard key.

RNS 315

- To toggle between different media, such as a CD or streaming audio from your phone, press the MEDIA hard key.
- Then press the media-specific soft key.

LEARN MORE AT
vw.com/jetta2013

Important Warnings and Safety Information, which you must read, are listed on the last panel, under iPOD ADAPTER WARNINGS.

Cruise Control

Text* **CRUZ** to **50467** to watch the Cruise Control video.
Message and data rates may apply.

Activate

- Locate the cruise control stalk on the left hand side of the steering column.
- Turn the switch on top of the cruise stalk to the ON position.
- The speedometer icon will appear in the multi-function display.

*Do not text while driving.

Cancel and resume

- To cancel the cruise speed, press the brake pedal or turn the switch on the top of the stalk to CANCEL.
- The CRUISE light will go off.
- To resume your speed, press the rocker switch up, towards RES/+.

Set cruising speed

When you get to your cruising speed, press the rocker switch at the end of the cruise stalk towards SET/–.

The green CRUISE light will appear in the instrument cluster.

To increase your speed, press the rocker switch up, towards RES/+.

To reduce speed, press the rocker switch down, towards SET/–.

Your most recently set speed will appear as a small icon in the available multi-function display. It will remain in memory until you turn off the vehicle, or until you turn the switch on the top of the cruise stalk to the OFF position.

Important Warnings and Safety Information, which you must read, are listed on the last panel, under CRUISE CONTROL WARNINGS.

Manual Climate Control

Cool the interior

Turn the temperature to MAX.

Turn the fan speed to 4.

The air recirculation light will come on automatically.

Turn the vent dial to the setting.

After reaching the desired temperature, turn the fan speed down to a lower setting.

Defrost the windshield

- Turn the temperature dial all the way to the right.
- Turn the fan speed to 3.
- Turn the vent dial to the setting.
- The AC light will come on automatically.*

*The AC is used to dehumidify the air.

Heat the interior

Turn the temperature dial all the way to the right.

Turn the fan speed to 3.

Turn the vent dial to the setting.

Important Warnings and Safety Information, which you must read, are listed on the last panel, under MANUAL CLIMATE SYSTEM WARNINGS.

Manual Seats

Text* **SEAT** to **50467** to watch the Manual Seats video.
Message and data rates may apply.

Adjust your seat height

Use the lever directly beneath the left side of the seat.

Pull up to raise the seat. Push down to lower the seat.

Adjust your seat forward or back

- Pull up on the handle under the driver's seat.
- Rock forward or back to a comfortable position.
- Release the handle to lock the seat in place.

Recline your seat

Lift the lever on the lower rear of your seat and lean forward or back to adjust your seat angle.

The seat back will lock in its position when you release the lever.

*Do not text while driving.

LEARN MORE AT
vw.com/jetta2013

Important Warnings and Safety Information, which you must read, are listed on the last panel, under MANUAL SEATS WARNINGS.

Trunk

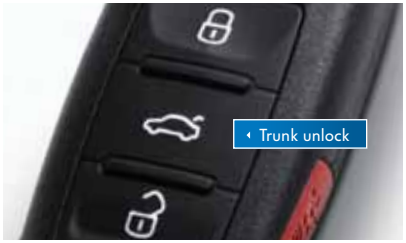
Open the trunk

There are three ways to open the trunk:

- Press and hold the trunk button on the key fob and the trunk will open.
- Pull the trunk release button on the driver door.
- Press the unlock button twice. Then press the large button (called the microswitch) above the license plate and lift slightly.

Close the trunk

To close the trunk, grab the recessed handles located near the outer corners of the interior and pull.



Important Warnings and Safety Information, which you must read, are listed on the last panel, under LUGGAGE COMPARTMENT WARNINGS.

Tire Pressure Monitoring System

Correct tire pressure

TPMS Set Button

Cooler temperatures may cause a warning to appear and then disappear as the tires warm up. This is a good reminder to check and adjust the tires to the proper inflation pressure.

Seeing the TPMS light? Here's what to do.

The correct tire pressure is displayed on the sticker on the driver's door jamb. Inflate your tires to those specifications, not to the number on your tires.

If you see the TPMS light on your instrument panel or the message "tire pressure too low" in the multi-function display, check all tires and inflate the low tires to the correct pressure as soon as possible.

After inflating the low tire(s) to the proper pressure, turn the ignition on and press the SET button inside the glove compartment for at least two seconds.

You will hear a beep and the TPMS light will go off.

The TPMS light will remain on until the tires are filled to the proper pressure.

vw.com/jetta2013

Important Warnings and Safety Information, which you must read, are listed on the last panel, under TPMS WARNINGS.

Important Safety Warnings

BLUETOOTH® WARNINGS

- Collisions and injuries can occur if the driver is distracted. Speaking on or using a phone while driving can distract the driver from traffic.
- Select the volume settings so that the acoustic signals from the outside are still audible (for example, the sirens of emergency rescue vehicles). Observe legal regulations.
- In areas with no or poor mobile network coverage and possibly in tunnels, garages and subways, phone conversations may be interrupted, and it may be impossible to make phone calls–even emergency calls!
- In some countries, emergency calls may only be supported when the mobile phone is connected to a mobile phone package which has a SIM card that is "not blocked" and/or has sufficient credit on it.
- Unmounted or improperly mounted mobile phones can fly around in the event of a sudden driving or braking maneuver or a collision. This may cause injuries.
- Never place or mount a mobile phone on doors, on the windshield or on or near the area on the steering wheel marked "AIRBAG," the instrument panel, the seat backrests or the areas between these points and the driver/passengers. Mobile phones can lead to serious injuries in cases of collisions, especially when the airbags are inflated.
- Always switch off your mobile telephone at gas stations or wherever there is a fire or explosion hazard. Electromagnetic radiation can cause sparks which can start fires.
- The mobile phone will automatically connect to the mobile network when the Bluetooth connection to the mobile phone package is disconnected.
- Using a radio device in the vehicle without a connection to an external antenna might exceed electromagnetic radiation thresholds. This also applies if the external antenna is not installed properly.
- Keep a distance of at least eight inches between the antennas of the mobile phone and the pacemaker, since mobile phones can affect the functionality of a pacemaker.
- Do not carry a mobile phone on standby mode in the breast pocket directly on top of a pacemaker.
- If interference is suspected, immediately switch off the mobile phone.
- Always keep the armrest closed while driving. The center armrest can interfere with the driver's elbow movement and thus cause collisions and severe injuries.

CRUISE CONTROL WARNINGS

Using the cruise control when it is not possible to drive safely at a constant speed can be dangerous and can lead to an accident and serious personal injuries.

- Never use cruise control when driving in heavy or varying traffic or when you cannot keep a safe distance between you and the vehicles ahead of you.
- Never use cruise control on steep, winding, or slippery roads (such as gravel roads, wet roads, or snowy or icy roads) or on roads with standing water.
- Never use cruise control when driving off-road or on unpaved roads.
- Always adjust your speed and the distance you keep between you and the vehicles ahead of you to the road, traffic, weather and visibility conditions.
- To help prevent unintended operation of cruise control, switch the system off when it is not being used.
- It is dangerous to use the Resume feature when the previously set speed is too high for the existing road, traffic, or weather conditions.
- When traveling downhill, the cruise control may not be able to maintain a constant speed. The vehicle may speed up because of its own weight. Downshift and/or use the foot brake to slow the vehicle.

IPOD® ADAPTER WARNINGS

Driver distraction, including the operation of external audio devices, can cause accidents and serious personal injury.

- Always focus your undivided attention on driving the vehicle.
- Never display video images in the display when the vehicle is moving.
- Use the radio navigation system only if road, traffic, and weather conditions permit and you will not be distracted from your driving.
- Always obey applicable laws regarding the use of displays when the vehicle is moving.
- Always adjust volume so that horns and warning sounds from outside the vehicle (police and fire truck sirens, for example) can be clearly heard at any time.
- Observe legal regulations.
- Always drive attentively and responsibly.
- Setting the volume too high can damage the hearing. This applies especially to volumes above about 85 decibels.
- Select volume settings so that acoustic signals from the outside are always audible (for example, the sirens of emergency rescue vehicles).
- Please lower the volume before changing or connecting to an audio source.
- Unmounted or improperly mounted external devices can be thrown through the passenger compartment in the event of a sudden driving or braking maneuver or an accident, causing injury.
- Never leave external devices in the doors, on the front windshield, on or near the area marked "AIRBAG" on the steering wheel, instrument panel, seat backs, or between these areas and the occupants. External devices can cause serious injury in the event of an accident, especially if the airbags inflate.
- Connecting cables of external devices may obstruct the driver. Route cables so as not to interfere with the driver.
- The armrest can affect the elbow room of the driver and thus cause accidents and severe injuries. Always keep the armrest closed while driving.

LUGGAGE COMPARTMENT WARNINGS

Accidents and severe personal injuries can result if you unlock, open, or close the luggage compartment lid when someone is in the way.

- Only open or close the luggage compartment lid if no one is in the way.
- After closing the luggage compartment lid, always make sure that it is properly closed and locked so that it cannot open suddenly when the vehicle is moving. The closed luggage compartment lid must be flush with the surrounding auto body parts.
- Always keep the luggage compartment lid closed while driving to help keep poisonous exhaust gas from being drawn into the vehicle.
- Never open the luggage compartment lid when a luggage rack is installed and loaded. If, for example, there are bicycles on a carrier on the luggage compartment lid, it is possible that the lid will not be able to open automatically. An open luggage compartment lid may fall on its own because of the additional weight. If necessary, prop open luggage compartment lid. Remove the weight from the luggage rack first.
- Close and lock the luggage compartment lid and all doors when the vehicle is not in use. First, make sure that no one is left inside the vehicle.
- Never leave your vehicle unattended or let children play around your vehicle, especially when the luggage compartment lid is open. A child could crawl into the vehicle and pull the luggage compartment lid shut, becoming trapped and unable to get out. A closed vehicle can become very hot or very cold, depending on the season. Particularly in the summer, heat build-up in the passenger and luggage compartment of a parked vehicle can result in temperatures in the vehicle that are much higher than the outside temperatures. Temperatures can quickly reach levels that can cause unconsciousness and death, particularly to small children.
- Never leave children or anyone who cannot help themselves behind in the vehicle. They may lock the vehicle with the vehicle key or the power locking switch and lock themselves in.

MANUAL CLIMATE SYSTEM WARNINGS

Poor visibility increases the risk of collisions and other accidents that cause serious personal injuries.

- Always make sure all windows are clear of ice, snow, and condensation for good visibility to the front, sides, and rear.
- Maximum heating output and fast defrosting are not possible until the engine has reached operating temperature. Wait until you have good visibility before driving off.
- Always make sure you know how to properly use the heating and ventilation systems as well as the rear window defogger that you will need for good visibility.
- Never use air recirculation for long periods of time. When the air conditioner is off and recirculation mode is on, condensation can quickly form on the windows and greatly reduce visibility.
- Always switch off recirculation mode when it is not needed. Stale air causes driver fatigue and reduces driver alertness, which can cause accidents, collisions, and serious personal injury.
- Never switch off the fan for a long period of time and never use air recirculation a long period of time because no fresh air will come into the passenger compartment.

MANUAL SEATS WARNINGS

Improper seating positions increase the risk of severe or fatal injuries in a crash or other accident, especially when the airbag deploys.

- All occupants must sit properly and be properly restrained at all times. This also applies to wearing a safety belt.
- Never let more people ride in the vehicle than there are seating positions with safety belts available.
- Always secure children in the vehicle with an approved and suitable restraint system appropriate for their age, weight, and height.
- Always keep your feet on the floor in front of the seat. Never rest them on the seat, instrument panel, out of the window, etc. The airbag system and safety belt will not be able to protect you properly and can even increase the risk of injury in a crash.
- Always adjust seat, safety belts, and head restraints properly before driving and make sure that all passengers are properly restrained.
- Push the passenger seat as far back as possible. Always be sure that there are at least 10 inches (25 cm) between the front passenger's breastbone and the instrument panel.
- Always adjust the driver's seat and the steering wheel so that there are at least 10 inches (25 cm) between your breastbone and the steering wheel.
- Adjust the driver's seat so that you can easily push the pedals all the way to the floor while keeping your knee(s) slightly bent. The distance to the instrument panel in the knee area must be at least 4 inches (10 cm).
- If these requirements cannot be met for physical reasons, contact an authorized Volkswagen dealer or an authorized Volkswagen Service Facility to see whether adaptive equipment is available.
- Always hold the steering wheel on the outside of the steering wheel rim with your hands at the 9 o'clock and 3 o'clock positions to help reduce the risk of personal injury if the driver's airbag inflates.
- Never hold the steering wheel at the 12 o'clock position or with your hands at other places inside the steering wheel rim or on the steering wheel hub. Holding the steering wheel the wrong way can cause serious injuries to the hands, arms, and head if the driver's airbag inflates.
- Pointing the steering wheel toward your face decreases the ability of the driver's airbag to help protect you in a collision.
- Never drive with backrests reclined or tilted back farther than necessary to drive comfortably. The farther back the backrests are tilted, the greater the risk of injury caused by incorrect positioning of the safety belts and improper seating position.
- Never drive with the front seat passenger backrest tilted forward. If the front airbag deploys, the front backrest can be forced backward and injure passengers on the rear seat.
- Sit as far back as possible from the steering wheel and the instrument panel.
- Always sit upright with your back against the backrest with the front seats properly adjusted. Never lean against or place any part of your body too close to the area where the airbags are located.
- Rear seat passengers who are not properly seated and restrained are more likely to be seriously injured in a crash.
- Improper adjustment of the seats can cause accidents and severe injuries.
- Never adjust the seats while the vehicle is moving. Your seat may move unexpectedly and you could lose control of the vehicle. In addition, you will not be in the correct seating position while adjusting the seats.
- Adjust the front seat height, angle and longitudinal direction only if the seat adjustment area is clear.
- The adjustment of the front seats must not be restricted by things in the footwell in front or behind the seats.

NAVIGATION WARNINGS

Operating the radio navigation system while driving can distract from traffic and lead to accidents.

- Observe legal regulations.
- Always drive attentively and responsibly.
- Setting the volume too high can damage the hearing. This applies especially to volumes above around 85 decibels.
- Select volume settings so that acoustic signals from the outside are audible (for example, the sirens of emergency rescue vehicles).
- Inserting data media while driving can distract from traffic and lead to accidents. Always keep the storage compartment closed while driving.

PREMIUM VIII WARNINGS

Distracting the driver from traffic can lead to collisions and injuries. Using the radio system while driving can distract from traffic.

- Observe legal regulations.
- Always drive attentively and responsibly.

- Setting the volume too high can damage the hearing. This applies especially to volumes above about 85 decibels.
- Select volume settings so that acoustic signals from the outside are always audible (for example, the sirens of emergency rescue vehicles).
- Please lower the volume before changing or connecting to an audio source. Unmounted or improperly mounted external devices can be thrown through the passenger compartment in the event of a sudden driving or braking maneuver or a collision, causing injury.
- Never leave external devices in the doors, on the front windshield, on or near the area marked "AIRBAG" on the steering wheel, instrument panel, seatbacks, or between these areas and the occupants. External devices can cause serious injury in the event of a collision, especially if the airbags inflate. Connecting cables of external devices may obstruct the driver. Route cables so as not to interfere with the driver.
- The armrest can affect the elbow room of the driver and thus cause collisions and severe injuries. Always keep the armrest closed while driving.
- Injuries can be caused by invisible laser beams if the housing of the CD player is opened. Have the CD player repaired only by a specialist.

RNS 315 AUDIO WARNINGS

Distracting the driver from traffic can lead to collisions and injuries. Using the radio system while driving can distract from traffic.

- Observe legal regulations.
- Always drive attentively and responsibly.
- Setting the volume too high can damage the hearing. This applies especially to volumes above about 85 decibels.
- Select volume settings so that acoustic signals from the outside are always audible (for example, the sirens of emergency rescue vehicles).
- Please lower the volume before changing or connecting to an audio source. Unmounted or improperly mounted external devices can be thrown through the passenger compartment in the event of a sudden driving or braking maneuver or a collision, causing injury.
- Never leave external devices in the doors, on the front windshield, on or near the area marked "AIRBAG" on the steering wheel, instrument panel, seatbacks, or between these areas and the occupants. External devices can cause serious injury in the event of a collision, especially if the airbags inflate.
- Connecting cables of external devices may obstruct the driver. Route cables so as not to interfere with the driver.
- The armrest can affect the elbow room of the driver and thus cause collisions and severe injuries. Always keep the armrest closed while driving.
- Injuries can be caused by invisible laser beams if the housing of the CD player is opened. Have the CD player repaired only by a specialist.

TIRE PRESSURE MONITORING SYSTEM WARNINGS

Incorrect tire pressures and/or underinflation can cause sudden tire failure, loss of control, collision, serious personal injury or even death.

- When the warning symbol appears in the instrument cluster, stop and inspect the tires.
- Incorrect tire pressure and/or underinflation can cause increased tire wear and can affect the handling of the vehicle and stopping ability.
- Incorrect tire pressures and/or underinflation can also lead to sudden tire failure, including a blowout and sudden deflation, causing loss of vehicle control.
- The driver is responsible for the correct tire pressures for all tires on the vehicle. The recommended tire pressure values are listed on a sticker inside the driver door.
- The TPMS can only work correctly when all tires on the vehicle are filled to the correct cold tire inflation pressure specified for the tires installed on the vehicle.
- Using incorrect tire pressure values can cause accidents or other damage. Always inflate the tires to the correct specified cold tire pressure values for the tires installed on the vehicle.
- Always maintain correct cold tire inflation pressure so that TPMS can do its job.
- Always inflate tires to the recommended and correct tire pressure before driving off.
- Driving with underinflated tires causes them to flex (bend) more, letting them get too hot, resulting in tread separation, sudden tire failure, and loss of control.
- Excessive speed and/overloading can cause heat build-up, sudden tire failure and loss of control.
- If the tire pressure is too low or too high, the tires will wear prematurely and the vehicle will not handle well.
- If the tire is not "flat" and you do not have to change a wheel immediately, drive carefully and at reduced speed to the nearest service station to check the tire pressure and add air as required.
- When replacing tires or wheel rims on vehicles equipped with TPMS always read and heed the information and all WARNINGS regarding Tires and wheels.

Got questions? We've got answers.
